

Lab Exercise Two

1. Create a web page with a table consisting of 4 columns and 7 rows. In the header of the table, type the names of 4 of your favourite bands. In the body, list 7 of their best songs. Link at least one song title from each band to its YouTube video if available.
2. Create a form and use the method="GET". On the form add 4 checkboxes in a group, and 4 radio buttons in a group. (each button in a group has the same name). Add a textbox with the label username and add a password field with the name password. Finally add a submit button. Now use the form by checking the checkboxes and radio buttons and entering data in the username and password fields. Examine the URL in the address bar after clicking the submit button.
3. Change the form method to POST and see how it affects the URL when you click the submit button.
4. Create a form which looks like the image below. Use the labels element. For the email textbox, use type="email". "email" is a type attribute value in HTML5. It checks the email the user enters to see if it is a valid email address or not.

Post your comments

The image shows a web form titled "Post your comments". It contains the following elements:

- A label "Name" followed by a text input field.
- A label "E-mail" followed by a text input field.
- A label "City" followed by a text input field.
- A label "Comments" followed by a large text area with the placeholder text "Enter comments".
- A button labeled "Submit comment" at the bottom.

Assessment

You need to get each lab exercise signed off in one of the supervised labs for it to be marked as complete. Deadline for exercise one is **Thursday 24th July**.

1. Show your web page to one of the lab demonstrators, make sure it meets all of the criteria described in 1-4 above.
2. Lab demonstrator will ask you to make changes to your page which will require use of different form elements.
